

Only available for our [commercial Corporate version](#).

This is an experimental new feature that allows you to send data from Faraday to JIRA. In order to do it, go to our [Status Report](#), select the desired vulnerabilities and then click on the **JIRA** button. Keep in mind that only confirmed vulnerabilities can be sent.

Once the JIRA dialog opens, fill in all fields and click **OK**.

A dialog box titled 'Send To jira' with a 'Cancel' button (red) and an 'OK' button (green) in the top right corner. Below the title, it says 'Please complete all fields below'. There are four input fields: 'Username' (containing 'faraday'), 'Password' (containing '.....'), 'Project ID' (containing 'jira project ID'), and 'Host' (containing 'jira host'). There is also a 'Port' field (containing 'jira port'). At the bottom right, there are 'Cancel' (red) and 'OK' (green) buttons.

After the vuln has been sent to JIRA the list will be updated with a link to the ticket.
