

- Commercial version -

During the Professional or Corporate Faraday Server Setup process an administrator user is created. Default username is `faraday` and password `changeme`.

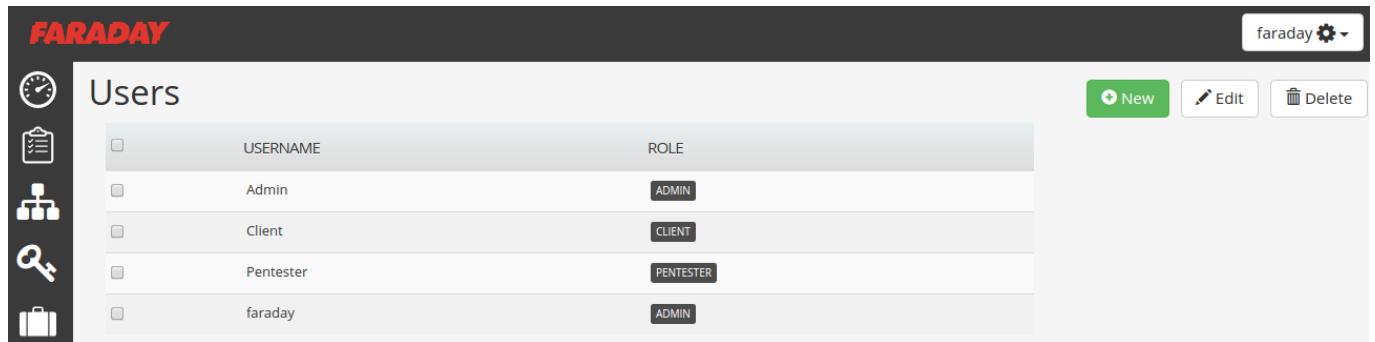

To manage users start a session in the Web UI logging in as shown below and then click on the **Faraday** slider menu on the right of the screen

and then on **Users**

A list containing all the users will show up, including buttons to create, edit or delete.

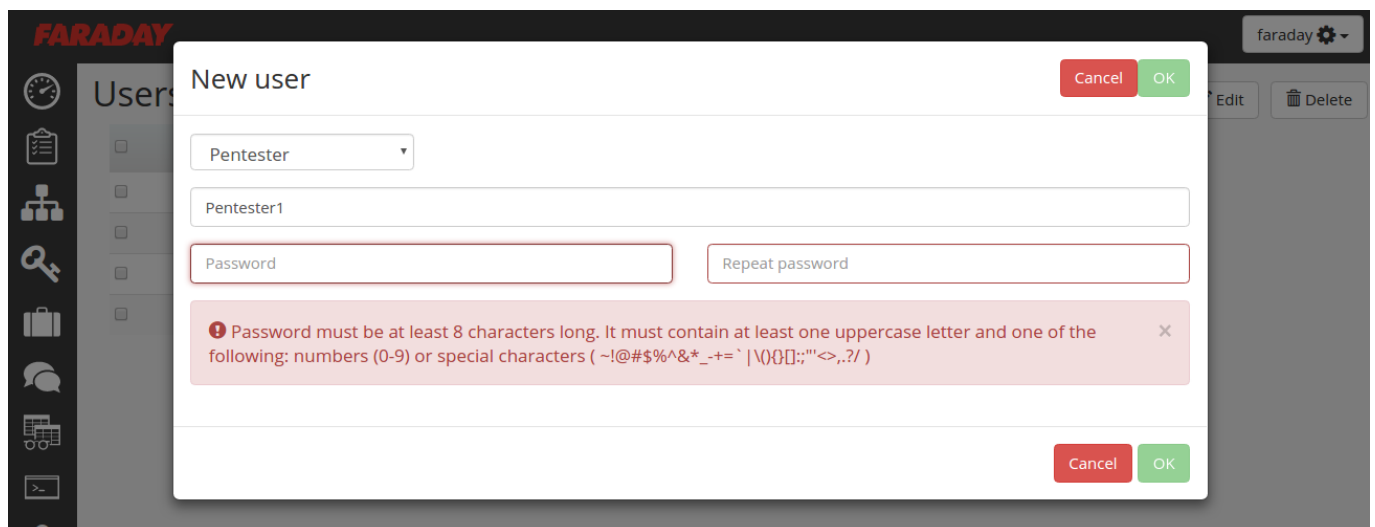

Roles

Faraday supports three types of Roles with different levels of access for the application.

- **Admin:** This role lets the administrator manipulate options regarding users, workspaces, vulnerabilities, reports, etc.
- **Pentester:** This role allows the pentester to access permitted workspaces and create, edit or erase vulnerabilities.
- **Client:** This role is allowed to access permitted workspaces without being modification permission.

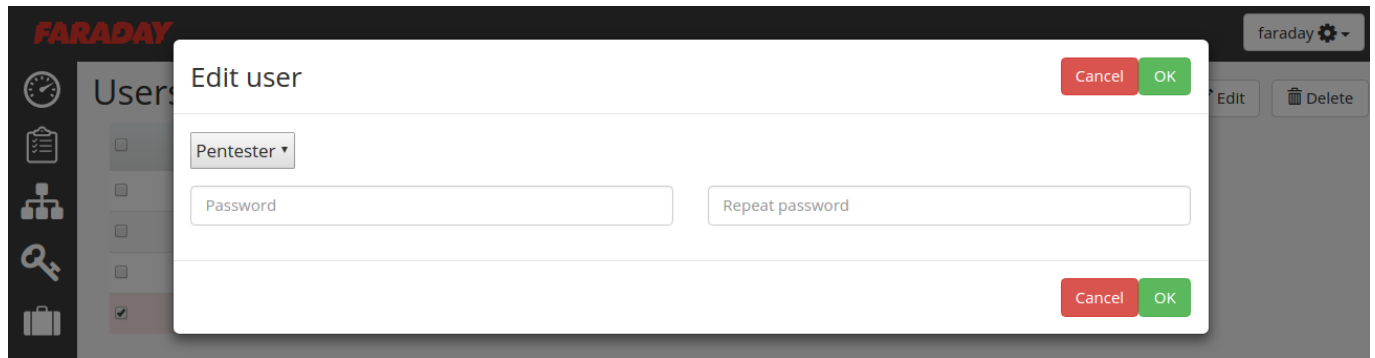

Creating Users

From the user window, click **New** and fill out the form.

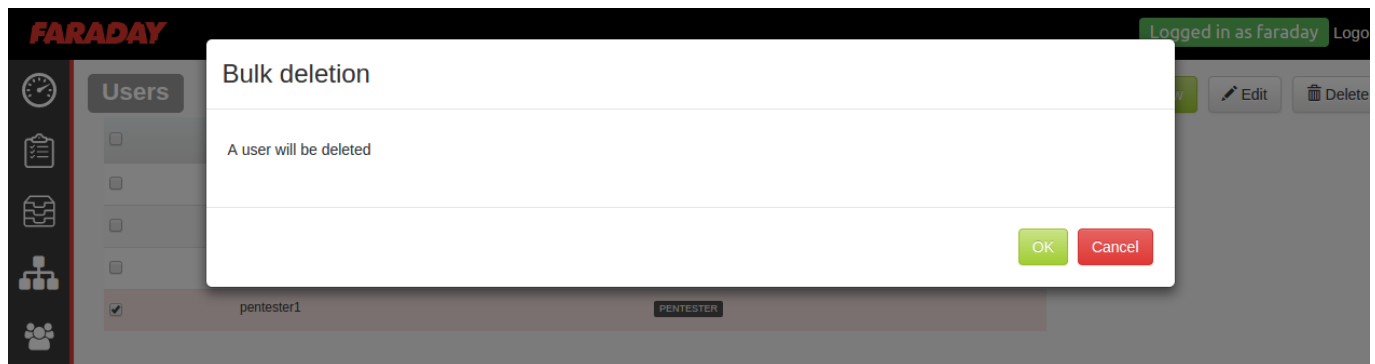

Editing Users

From the user window, select the user and click **Edit**.

Eliminating Users

From the user window, select the user and click **Delete**.

Logout

On the upper right hand part of the screen you can find the logout button so you can close your session.
