One of the big goals in every internal pentest is gathering service credentials to log in to a host, escalate privileges and pivot. Save all the found data in Faraday's and see it in our Credentials View!

# How to add a new credential

## Host

In the hosts view you have a special column that says credentials and has a number with the amount of credentials you have already created. Click on that number.

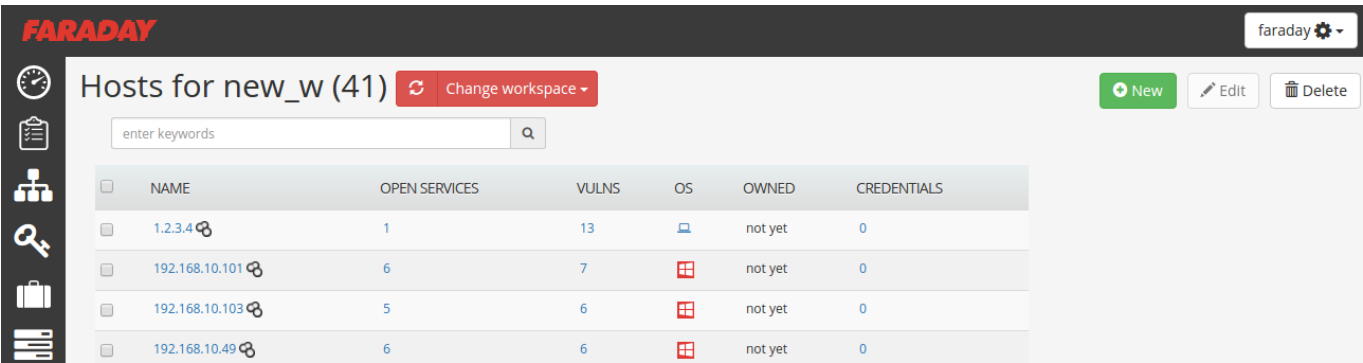

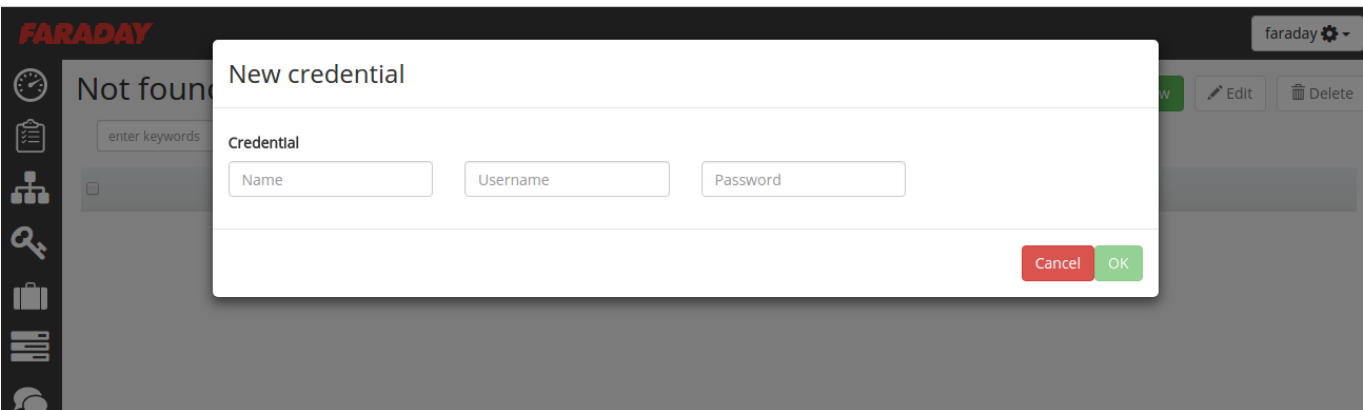

## Service

To add it to a Service after entering the Hosts view click on the desired target and follow the steps bellow:

Next just click on the green New button 

And just complete the data like it shows in the picture above!

# View all the Credentials

When you go to the Credentials View you will see all the credentials you have for every target on that workspace:
